Phone +61 497 484 475

LOCATION

Region VIC

PROFESSIONAL SKILLS SUMMARY

Languages & Foundations: Pascal (Turbo/Object Pascal), Pascal compiler concepts, Pointers & structs, Algorithms & data structures, C#

.NET / Microsoft Stack: ASP.NET / MVC, ASP.NET Core (.NET Core), Kestrel, IIS, Silverlight, SOAP, WCF, COM Interop

Device & Systems Integration: Low-level IO / port access, COM objects, Device control, CLI tools, Automation & scripting

Cloud & DevOps: Azure (App Services, Storage), CI/CD, Containerisation (Docker), Monitoring & logging

Tools & Practices: Unit testing, Design for maintainability, Documentation & API design, Migration of legacy codebases

WORK EXPERIENCE

2010 TO 2014

Founder / CTO — Device integrations & Desktop apps at Pi-Labs

Led cross-platform desktop and device-integrated projects; built reusable frameworks and native integrations using Pascal and C#.

- Developed multiple management systems and CLI tools in Pascal during university and early product development, using structs, pointers and low-level IO for device control.
- Built desktop apps and device-control integrations using C# with COM interop to call low-level device APIs and orchestrate hardware workflows.
- Authored reusable libraries and frameworks (games and utilities) to accelerate development across desktop and embedded integrations.

2016 TO 2018

Senior Full-Stack Engineer — .NET & Cloud migration at Exact

Worked on .NET Core proof-of-concepts and cloud-native deployments while maintaining legacy ASP.NET/IIS services; introduced modern API patterns and Kestrel-based hosting.

- Led migration experiments from legacy ASP.NET/IIS to .NET Core APIs hosted on Kestrel and Azure, demonstrating performance and deployment benefits.
- Implemented web APIs and integration points (SOAP/WCF and new RESTful services) to bridge legacy customers and modern clients.
- Built developer tooling and CI/CD pipelines to support repeatable deployment and testing of .NET services.

2006 TO 2010

Pascal / Compiler Projects & Device Control at University & Personal Projects

Academic and personal projects using Pascal including a mini Pascal compiler and multiple management/CLI systems interfacing with hardware.

- Implemented a mini Pascal compiler as part of Compiler Construction coursework — lexical analysis, parsing, symbol tables and basic code generation.
- Built CLI tools with animated console output and complex problem-solving routines for data processing in Pascal.
- Implemented hardware IO control code (reading/writing ports, signal handling) for embedded/desktop device projects using Pascal and later interfacing via C#.

2008 TO 2016

C# / .NET Developer at Misc / Legacy .NET Work (Pi-Labs, freelance)

Worked across SOAP, Silverlight, ASP.NET and desktop apps; deployed and managed IIS-hosted services and desktop integrations.

- Built and maintained ASP.NET web apps and SOAP integrations for clients, including IIS deployment and configuration.
- Developed Silverlight/UIs and desktop tooling for internal workflows; used COM interop for device management where required.
- Ported and documented legacy Pascal modules into C# proofs-of-concept to validate maintainability and integration approaches.

EDUCATION

2006 TO 2010

FAST - NUCES

- Bachelor: *Computer Science*

LANGUAGES

English	Fluent
Urdu	Native
