

Amir Ali Jiwani

Lead / Staff Engineer — Platform, Identity & Distributed Systems

CONTACT

Email amirali.jiwani89@gmail.com
Phone +61 497 484 475

LOCATION

Region VIC

PROFESSIONAL SKILLS SUMMARY

Languages & Frameworks: TypeScript, Node.js, JavaScript, React, React Native, .NET Core

Cloud & Infra: AWS (ECS), Kubernetes, Docker, CI/CD, Terraform/Infra-as-code, Azure

Architecture & Patterns: Microservices, Event-driven systems, Observability, Scalability, Reliability

Identity & Security: Auth0, OAuth, IAM, Authentication SDKs, Audit / impersonation logging

Tools & Practices: Buildkite, Monitoring / Tracing, Automated testing, Design reviews, Pairing / Mentoring

WORK EXPERIENCE

2018 TO PRESENT

Lead / Staff Engineer — Platform & Identity at [SEEK](#)

Technical lead on SEEK's identity and marketplace platform. Led architecture, SDKs, migrations and observability to deliver secure, reliable authentication across product teams.

- Led design and delivery of a single identity platform and Auth0 migration serving ~11M MAU and ~2B requests/month; unified SeekPass into Seek, increasing shared user data by 93% and eliminating ~97% duplicate MAUs.
- Built multi-language identity SDKs and authentication integrations adopted across all product teams, removing repeated login flows and reducing integration effort.
- Re-architected legacy auth components into observable, containerised services (Node.js, TypeScript, AWS, Kubernetes), improving maintainability and lowering incident surface.
- Designed and shipped an impersonation-audit logger SDK; surfaced 8 high-risk cases and enabled SteerCo-prioritised remediation.
- Led bulk migration strategies and zero-downtime vendor cutovers to ensure consistent authentication behaviour across products.
- Improved telemetry and monitoring (AWS ECS alerts, structured tracing) to detect 5xx spikes earlier and reduce customer impact.

2021 TO 2022

Senior Engineer / Platform at [Gaditek](#)

Platform work for PureVPN and cross-product authentication, developer tooling and legacy decommissioning.

- Enabled PureVPN backbone and cross-product authentication flows for ~1M users and 6.5k+ servers across 78 countries; implemented vendor-based OAuth to support multi-device journeys.
- Built cross-platform POCs (React / Flutter) and platform SDKs to accelerate client rollouts.
- Led legacy decommissioning to enable server upgrades and security hardening, achieving full server compliance.
- Delivered developer tooling and observability practices that reduced repeat failures and improved incident RCA.

2016 TO 2018

Senior Full-Stack Engineer at Exact

Delivered mobile POCs, developer tooling and cloud-native patterns to modernise legacy ERP client experiences.

- Delivered a React Native POC and reusable component library enabling mobile demos for ~15k business customers; reduced demo prep and accelerated sales validation.
- Built 'BornAgainCarnotaurus' (Electron) tooling to streamline API authentication/testing and improve developer productivity.
- Introduced CI/CD and cloud-native patterns on Azure with .NET Core services to prove a migration path for legacy systems.
- Created navigation and UI abstractions enabling parallel feature streams and increased sprint throughput.

2010 TO 2014

Founder / CTO at Pi-Labs

Founded a cross-platform studio building apps, games and reusable frameworks; led engineering growth and client engagements.

- Built cross-platform apps and games (FeedGarfield, CandyPot, LongRangeGolf) reaching ~0.5–1M users; created a Cocos2d-based framework reused across 10+ games.
- Built a web-scraping → API platform (ASP.NET) used by 50+ clients to power Windows 8 launch apps (CNA, The Straits Times, DBS).
- Open-sourced developer libraries (EasyNDK-for-cocos2dx, Easy-CURL-for-PHP) used by the community.

2018 TO 2023

Senior Principal / Engineering Leadership at Other leadership roles (condensed)

Condensed summary for shorter tenures (PicklesAuctions, Agoda, short engagements). Focused on architecture, team formation and platform initiatives.

- Led architecture and platform initiatives, team formation and migrations across short-term leadership engagements.

EDUCATION

2006 TO 2010

FAST - NUCES

- Bachelor: *Computer Science*

LANGUAGES

English	Fluent
Urdu	Native
