PROFESSIONAL SKILLS SUMMARY

Leadership & Delivery: Hiring, Promotion coaching, OKRs, Roadmap alignment, Stakeholder management
Platform & Identity: Auth0 migrations, Authentication SDKs, Audit / impersonation logging, Bulk migrations, Vendor cutovers
Cloud & Practices: AWS (ECS), Kubernetes, Docker, CI/CD, Monitoring / Tracing
Technical Skills: TypeScript, Node.js, React, .NET Core, Design reviews

WORK EXPERIENCE

2018 TO PRESENT

Lead / Engineering Manager — Platform & Identity at [SEEK](#)

Lead and people/technical manager for SEEK's identity and marketplace platform. Responsible for hiring, coaching, roadmap and cross-team delivery to ensure secure, reliable authentication across product teams.

- Led and grew platform teams (up to 7 direct reports historically; current team ~4); hired 7 engineers via a centralised hiring pipeline and authored a successful promotion case aligned to the Engineering Growth Framework.
- Shaped platform roadmap and quarterly OKRs for marketplace identity services used across SEEK; partnered with Product and Architects to prioritise initiatives that delivered measurable business value.
- Managed consolidation of SeekPass into Seek identity, delivering a 93% increase in shared user data and removing ~97% duplicate MAUs.
- Instituted organisation-wide monitoring and incident practices (auto alerts on AWS ECS, structured telemetry), reducing customer-visible incidents and speeding recovery.
- Led cross-team incident responses and postmortems; directed a critical rollback and root-cause analysis that fixed an SDK transpilation bug affecting multiple teams.

2021 TO 2022

Engineering Lead / Manager at [Gaditek](#)

Reorganized engineering, established hiring pipelines and led cross-product authentication and legacy decommissioning initiatives for PureVPN and related products.

- Reorganized a single 30+ engineering group into ~10 focused squads with EMs and architects, enabling parallel delivery and AAARRR framework execution.
- Built a centralised hiring pipeline (resume → coding → collaboration → culture) and hired 10+ engineers and interns, improving hiring throughput and quality.
- Introduced team practices (regular 1:1s, career conversations, tech-debt discipline) that improved team health and delivery predictability.
- Led cross-product authentication programme and legacy decommissioning that improved platform security posture and operational stability.

2016 TO 2018

Senior Full-Stack Engineer / Team Lead at [Exact](#)

Senior engineer and team collaborator who helped embed Agile practices, reusable components and cloud-native patterns to modernise ERP client experiences.

- Acted as a senior full-stack engineer in a 6-person cross-functional team; embedded Agile ceremonies and helped the team progress from forming to performing.
- Championed reusable components, developer tooling and CI/CD practices that raised team velocity and were adopted elsewhere in the organisation.
- Packaged POCs for multiple clients and iterated rapidly to validate business value and inform roadmap decisions.

2010 TO 2014

Founder / CTO at Pi-Labs

Founded and scaled a cross-platform studio; led hiring, client engagements and product delivery across games, mobile and web.

- Scaled the company from 2 → 30+ engineers, hiring and mentoring cross-functional teams across web, mobile, desktop and games while maintaining low attrition.
- Managed client engagements (Mobank, Windows 8 launch apps) and converted client needs into repeatable delivery patterns and reusable platforms.
- Led early experimentation with new platforms and tooling (early Docker adoption, remote collaboration tooling) to improve developer productivity and time-to-market.

2018 TO 2023

Senior Principal / Engineering Leadership at Other roles (condensed)

Condensed summary for shorter tenures (PicklesAuctions, Agoda, short engagements). Focused on architecture, team formation and platform initiatives.

- Led architecture and platform initiatives, team formation and migrations across short-term leadership engagements.

EDUCATION

2006 TO 2010

FAST - NUCES

- Bachelor: *Computer Science*
